AMIGOS · PARADISE TOURS

Your website guide

amigosparadisetours.com · Everything you need to look after your website on your own.

Tip: keep this PDF on your phone. If you have a question, open the free **Claude** app, start a new chat, attach this PDF and ask, for example: *"Using this guide, how do I change the photo of Amaya's review?"*

1. How your website works

- Your website is one page in Spanish and English, made for travellers who find you in the Spanish WhatsApp group.
- **It works on its own:** no prices or dates that go out of date. Nothing needs to be updated to keep it working.
- **Hosting is free** and the website files are in your own GitHub account. The only cost is the domain, once a year.
- Things still missing (photos, answers) stay hidden from visitors. To see them, open **amigosparadisetours.com/?revisar**.

2. What you can do, and how

Change	How
Photos, reviews, places, routes, questions (FAQ), the car details, the lists of what you do, the link to your Google reviews	**Free**, by yourself, in your panel (section 4)
Questions, translations	**Free** Claude app: attach this PDF and ask
Other texts (top of the page, About me, the cards), the video, new sections	**Claude Pro** only the month you need it, or your friend (section 5)

All your documentation is also in your GitHub project: **README.md** (start here), this guide in the **docs** folder, and **CLAUDE.md** (the rules, for Claude and your friend).

3. Your accounts

What	Where
Website files	**github.com** · username **amigosparadisetours** · project **amigos-paradise-tours**
Your free panel	**app.pagescms.org** · sign in with your GitHub account
Domain	**Spaceship** (spaceship.com), in your friend's account. It must be renewed before **7 February 2027**: make sure automatic renewal is on.
Bigger changes	The **Claude** app, Pro plan only in the months you need it

Keep your passwords in a private place, never inside the website files.

4. Your free panel: photos, reviews, routes, questions and more

Open **app.pagescms.org**, sign in with GitHub and choose **amigos-paradise-tours**. Every time you tap **Save**, your website updates in about one or two minutes.

Change a main photo

1. Open **Main photos**. You see every photo of the website, each with its name:
   - **Photo at the top** (you on the steps)
   - **About me** (you lighting the clay lamps)
   - **How we'll travel** · 1, 2 and 3 (Buduruwagala, the food, the train)
   - **The car** · outside, inside and photo 3
2. Tap the photo you want to change, then **Upload** and choose the new photo.
3. Write in **"What the photo shows"** a few words in English, for example *"The boot of the car with four suitcases"*.
4. Tap **Save**.

Photos you can take now to make your website better:

- **The boot with suitcases inside**, so travellers see the luggage fits. Put it in **The car · photo 3**.
- **The back seats with the door open**, so they see the space for their legs. Put it in **The car · inside** or **photo 3**.
- **A photo with every new group** (with their permission): add it in **Photos with travellers**, or to their review.

Take them in daylight, with the phone horizontal for the car photos.

Add a new review

1. Open **Reviews** and tap **Add** (or **+**).
2. Fill in the **name**, the **country or city** (in Spanish and in English) and, if they said it, the type of trip.
3. Choose the **language** the review was written in.
4. Paste the review in **"Review, exactly as they wrote it"**. Don't change any words.

5. Add the **translations**: if it's in English, write the Spanish one; if it's in Spanish, the English one; if it's in another language, both. See "Translate a review" below.
6. Tick **"Show among the first 4 reviews"** only for your best reviews (keep about 4 ticked).
7. Tap **Save**.

Add or change the photo of a review

1. Open **Reviews** and tap the review.
2. Go to **"Photo of them with you"** and tap it.
3. Tap **Upload**, choose the photo from your phone, select it and confirm.
4. Tap **Save**.

Add a photo with travellers

Open **Photos with travellers**, tap **Add**, upload the photo, write a short description in English (for example *"Darshi with a family in Ella"*) and tap **Save**.

Places along the way

Under the routes there is a row of photos of places (Sigiriya, the tea plantations, Nine Arches…). Visitors slide it with their finger. Open **Places along the way** to add, change or remove one: upload the photo, write the name of the place in Spanish and English, and in **"Who took the photo"** the traveller's name and country, for example *Claudia Villa* and *España / Spain* (leave it empty if you took it). Use only your own photos or your travellers' photos, never photos from the internet.

Questions, the car and what you do for your travellers

- **Questions (FAQ):** change an answer, or tap **Add** for a new question. Write the question and your answer in Spanish and English (use *tú* in Spanish). Leave an empty line between paragraphs.
- **The car (details):** passengers, luggage, water, larger groups, and the sentence about music. Never write the car model.
- **Before, on arrival and during the trip:** the three lists of what you do. Add, change or remove a line, in Spanish and English.

For the translation, ask the free Claude app: *"Translate this into Spanish from Spain, using tú. Keep the meaning exactly: …"*

Add the link to your Google reviews

Do it when Google verifies your business profile. Until then the button is hidden.

1. Open **Google Maps**, find your business profile and tap **Share**. Copy the link.
2. In your panel, open **Links** and paste it in **"Link to my Google reviews"**.
3. Tap **Save**. In one or two minutes the button *"See all my Google reviews"* appears under your reviews.

Then ask your travellers to leave you a review on Google: it is what helps you most to be found.

Add a route

Your website shows 3 route ideas: *From the airport to Mirissa*, *To Arugam Bay* and *Ancient cities and the train*. Open **Routes** to change one, or tap **Add** for a new one. Every route gets a button on the website and is drawn on the map by itself. Fill in:

- **Short name for the button**, in Spanish and English (for example *Hasta Arugam Bay / To Arugam Bay*).
- **Who travelled:** always leave it empty, so all routes look the same ("A route I suggest").
- **Number of days** (optional) and a **short note** in Spanish and English.
- **Stops in order**, separated by ·, for example *Aeropuerto · Sigiriya · Kandy · Ella · Yala / Udawalawe · Mirissa*. Use **/** when it can be one place or the other.

Tap **Save**. If a place doesn't appear on the map, it still appears in the list. Ask Claude to add it to the map.

Photos: you can upload photos straight from your phone: big photos are made smaller by themselves a few minutes after you save. Only use photos the travellers agreed to share.

Translate a review

Open the free Claude app and write:

> Translate this review into Spanish from Spain. Keep the meaning exactly, don't improve it or add anything: "..."

Copy the translation into the panel. (Change "Spanish from Spain" to "English" when you need the English one.)

5. Other changes

For anything else (texts, new sections), you have two options:

- **Claude Pro for one month:** open the Claude app › **Code** › choose **amigos-paradise-tours** › write what you want in simple English (for example *"Change the answer about tips: ..."*). Claude changes it in Spanish and English and follows your website's rules. Then create the **pull request** and tap **Merge**. Cancel the plan when you finish: you keep it until the end of the month.
- **Your friend who made your old website:** you can invite him in GitHub (your project › Settings › Collaborators).

6. If something goes wrong

- **Nothing is ever lost:** GitHub keeps every previous version of your website.
- **A change doesn't appear:** wait 2–3 minutes and reload the page. On your phone, try with mobile data instead of wifi.
- **You made a mistake in the panel:** open the same entry, fix it and tap **Save** again.
- **Something looks broken:** ask Claude (with this guide attached), or your friend. With Claude Pro you can also write: *"Undo the last change"*.

Your website follows a few rules so it always sounds like you: reviews are always copied exactly, there are no prices on the website (they go on WhatsApp), and nothing is invented. The file **CLAUDE.md** in your GitHub keeps these rules for Claude. Please don't delete it.
